

A reminder from Western Power to submit your CAD files in MGA94

Western Power would like to remind all surveyors and electrical consultants that we require CAD drawings to be submitted in MGA94 format.

When a developer is completing a developer design and construct project, Western Power requires the CAD drawings of the electrical infrastructure design to be submitted prior to energisation occurring.

If you are an electrical consultant and the surveyor is providing you files in PCG format, we ask that you convert them to MGA94 prior to submitting them to Western Power.

We understand that due to the difference between PCG and MGA94 in representing the earth, the dimensions for the lots in the converted files will be marginally different and we can accommodate this.

Moving forward, if Western Power receives your files in a format other than MGA94, you will receive a call from one of our data service officers asking you to re-submit the file.

For further information you can contact Kristy Martinez, Data services officer on 9326 6943.
